Primary Examiner, Art Unit 3663

Continuation of 11. does NOT place the application in condition for allowance because: When a failure occurs in the working fiber link (10), the switches (SW) in the link between the nodes (14c and 14d) create a closed loop (20). ASE circulating in the loop creates a ring laser. When the power generated in the ring exceeds a threshold, the switches change back to a normal operating state. See column 5, lines 18 to 45 and figure 10. This structure reads on a link control laser configured to inject laser radiation in the loop, Claim 14 of 10/542,296 requires the positioning a lasing peak wavelength within a ring of EDFAs. As a result, the skilled artisan would have been motivated to seek out known structures for generating lasing wavlengths, such as a link laser.
